

# REMINDERS

---

Knowing how drugs interact is **CRUCIAL** for being safe when using!

Certain drugs, such as cocaine, alcohol, and benzos (Xanax, Valium, etc.), **can enhance** the effects of opiates to the point of being very dangerous and deadly. They could increase the likelihood of overdose.

Be as safe as possible—**PLEASE** take time to get trained to use Narcan/ Naloxone and have it on you when you use!

The best way to avoid abscesses, overdose, Hepatitis C, HIV, or other health conditions is to stop using. You can always ask a staff person for information or assistance on safe practices for drug use, treatment, and safe sex practices.

## LIFEPOINT SYRINGE ACCESS PROGRAM

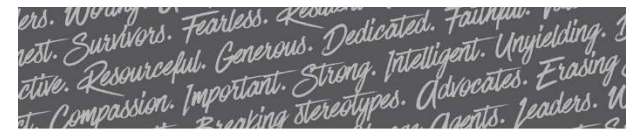

**Vivent Health**  
1311 N 6<sup>th</sup> St  
Milwaukee, WI 53212  
(414) 225-1608

**\*HIV and Hep C Testing Available**

# KNOWING YOUR DRUG INTERACTIONS

---

Stay safe no matter what you're using.

# WHAT HAPPENS WHEN YOU MIX DIFFERENT DRUGS?

	Shrooms	Cannabis	MDMA	Cocaine	Caffeine	Alcohol	Benzos	Opioids	Amphetamines
